Learning  
Standards  
Investigations  
Objectives  
Investigate the  
ingredients in pet  
foods found in pet  
foods Design a nutriti-  
onal package "people  
pellets" "people pel-  
lets" Did you realize  
that when you feed your pet their pelleted food, they are  
getting almost all of their nutrient requirements in one bite?  
Pelleted pet foods need to meet all of the animal's nutritional  
requirements.

**Main Idea**  
Pelleted pet foods need to meet all of the animal's nutritional  
requirements.

### Modeler

**Pre-Activity Question**  
Did you realize that when you feed your pet their pelleted food, they are  
getting almost all of their nutrient requirements in one bite?

What would a version of pelleted food look like for people?

### Activity

- Samples of various types of pelleted pet food
- Images that contain "people food" like fruits and vegetables.
- Pre-made bingo cards with fruits and vegetables (make your own or use pre-fab).
- Scissors
- Spoons
- Food service gloves
- Sandwich sized plastic bags that zip closed
- Grains: Pre-measured ½ cup bags of corn, rice and oat cereal - will need two bags of each grain per group
- Proteins: Bowls of powdered milk, soy nuts or sunflower seeds - will need two bags of per group
- Syrup
- Energy: Squirt bottles of honey and maple syrup
- Per group
- Or sunflower seeds - will need two bags of each grain per group
- Protein: Bowls of powdered milk, soy nuts or sunflower seeds - will need two bags of per group
- Flavors: Raisins and chopped dried apples
- Index cards labeled "Energy" "Protein"
- "Flavor" and "Grains" (one per group)
- Ingredient label from a human meal replace meat bar or drink

**Part I: Investigation**  
1. Have the students work in small teams. Give each team a bag of pet food and a marker.

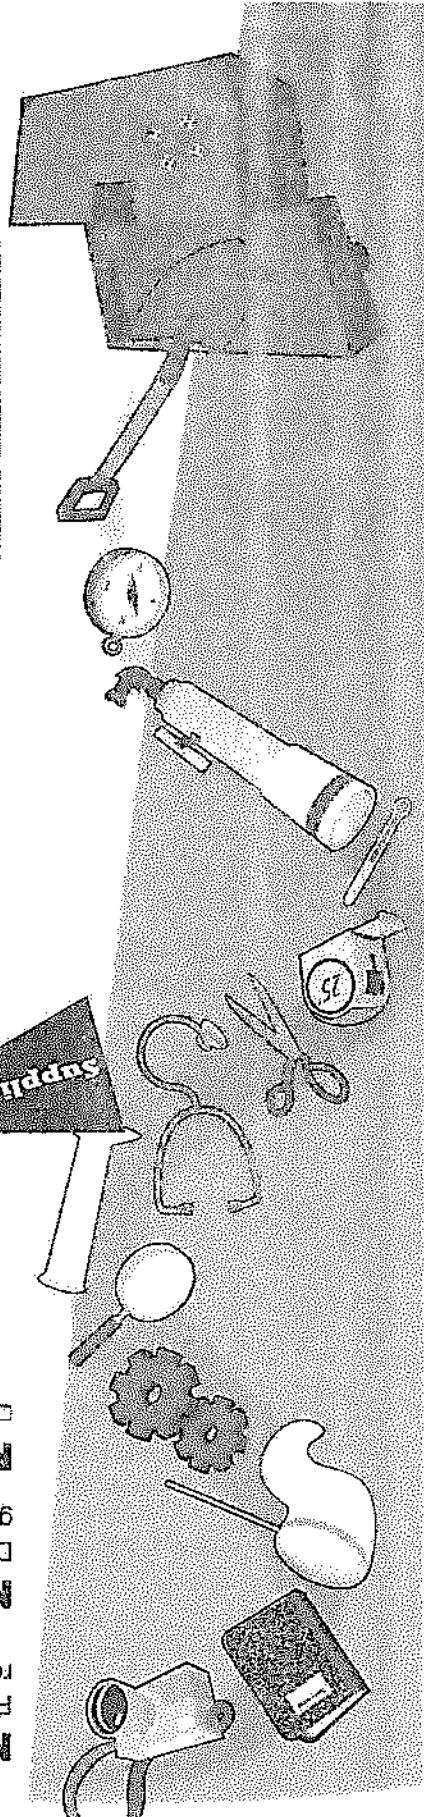

2. Instruct the teams to read the label of the pet food and seek out the "people food" ingredients. (Note: You may need to help the students interpret some of the ingredients. Have them focus on the easy ones first.)

3. Have them locate a picture of that food on their bingo card and "x" it with their marker.

## People Pellets

### Animal Science

Age/Ability Series:  
Animal Science  
Grade: 3-6  
Time: 45 min

## Extensions

- Have each team come up with a name and package label for their product.
- and calories. Have the entire group rate the recipes as high energy, low fat, high protein etc.
- Have each group use the nutrition labels from their pellet ingredients to make a chart of protein, fat

## Science Checkup • Questions to Ask to Evaluate What Was Learned

- Review the contents of each pellet and talk about the nutrition. Ask the group how many more ingredients they think they would need for their pellet to really meet all of their nutritional needs. Share a list of ingredients from a meal replacement drink or bar.
- Survey the group for taste testers. Have them taste only one bite and give their opinion on whether they would like to eat it every day for every meal.
- Have an adult add the energy ingredient. Use your discretion on how much will be needed to make a dough. Have the students work the ingredients into a pellet shape. If needed, a small amount of water can be added as well.
- Have the students add two spoons of their protein and flavor to their bag with the cereal, zip it closed, and take turns mixing by shaking the bag.
- Now have them shop for their protein, flavor and their energy.
- Have the students add two spoons for their protein, flavor and flavor to their bag with the cereal, zip it closed, and take turns mixing by shaking the bag.
- Survey the group for taste testers. Have them taste only one bite and give their opinion on whether they would like to eat it every day for every meal.
- Review the contents of each pellet and talk about the nutrition. Ask the group how many more ingredients they think they would need for their pellet to really meet all of their nutritional needs. Share a list of ingredients from a meal replacement drink or bar.

## Part 3: Grateful

- Show the group an energy bar and a pellet of pet food. Ask them what they have in common.
- Ask the group what would be the benefit in "powderizing" the food.
- Ask the group what they think it will taste the same or different? Will the nutrition have changed? Let a few volunteers sample the powder.
- Show the group an energy bar and a pellet of pet food. Ask them what they have in common.
- The team that gets the first bingo will be the first to select their ingredients in Part Three.
- If the teams do not get bingo with their own bag of food, have the groups rotate stations, leaving the food and marker. Each team will have a chance to use a new bag of food and marker. Continue to rotate until team gets bingo (or you run out of time.)
- Before the group meets, prepare a trail mix from the cereals listed in the grain group above. Have the students sample it. (Be sure to check for food allergies first)
- Now place a small amount of the trail mix in a double plastic bag and let them roll it into powder. Ask the students if they think it will taste the same or different? Will the nutrition have changed?
- Give each team one of each card: (protein, energy or grain)
- Have each team shop for their grains. Each group gets a "free" bag of corn cereal plus whichever they select.
- Now have them "powderize" their cereal by rolling it out in two plastic bags.
- Have the students add two spoons for their protein, flavor and flavor to their bag with the cereal.
- Survey the group for taste testers. Have them taste only one bite and give their opinion on whether they would like to eat it every day for every meal.

## Part 2: Taste Test

- The team that gets the first bingo will be the first to select their ingredients in Part Three.
- Leave the food and marker. Each team will have a chance to use a new bag of food and marker. Continue to rotate until team gets bingo (or you run out of time.)
- If the teams do not get bingo with their own bag of food, have the groups rotate stations,

**Animal Schemes:** **People Pellets**

**4-H SCIENCE**

- Protein: Any of a large group of nitrogenous organic compounds that are essential constituents of living cells; consist of polymers of amino acids; essential in the diet of animals for growth and for repair of tissues; can be obtained from meat, eggs, milk and legumes.
- Carbohydrate: Any of a group of organic compounds that includes sugars, starches, celluloses and gums and serves as a major energy source in foods.
- Fat: Organic compounds that are made up of carbon, hydrogen and oxygen. They are a source of energy in foods. Fats belong to a group of substances called lipids, and come in liquid or solid form.
- All fats are combinations of saturated and unsaturated fatty acids.
- Nutrients: A chemical that an organism needs to live and grow or a substance used in an organism's metabolism which must be taken in from its environment. Essential nutrients - proteins, carbohydrates, fats and oils, minerals, vitamins and water.
