The Zaner-Bloser font used in this manual was chosen because it closely resembles children’s writing style.

Initial Development Team (1996-1997):
A debt of gratitude is owed to the following people for their persistence and foresight in compiling the initial project activity manuals:

Contact your local Extension office for a list of available project activity manuals.

Welcome to the Mini 4-H Program! Mini 4-H is designed for children in grades K-2 to explore a variety of project activity areas and to interact with caring adults and other children.

Children receive this project activity manual when they enroll in Mini-4-H. This manual, and the manuals on various other topics, will provide fun, age-appropriate learning activities throughout their year(s) in Mini 4-H.

As a Mini 4-H adult helper, your job will be to guide and encourage each child through the activities. A wide range of activities is provided to allow you to choose the ones most appropriate for the children you are working with. It is strongly suggested that you do not complete the activities for them. Instead, help them, guide them, work with them, and let them do all that they possibly can. 4-H believes in allowing children to learn by doing. The Mini 4-H project activities are hands-on learning opportunities designed to provide a meaningful educational experience for youth.

Additionally, the Mini 4-H program is set up to allow children to display a project activity that is based upon information in this manual. Some children may want to exhibit at the 4-H Fair. The 4-H Fair is an exciting week that allows community youth to showcase their enthusiasm for learning. Children may choose to display a project activity they did by themselves or one they did with a group. Other children may choose to showcase their work in other ways, such as displaying it in a special place in their own home.

Mini 4-H is fun! Children will certainly enjoy it. You can have fun too, by guiding and helping as children participate in the program. Encourage and praise the children as they have fun learning and sharing with you. If you have any questions regarding Mini 4-H or other 4-H programs, please contact the Extension office in your county.
The Mini 4-H program can be used with individual children, but it works best when used in a group of 2 or more children. Children working cooperatively in groups develop positive images of themselves and their ideas. Other ways adult helpers can maximize the benefits of Mini 4-H are to:

- **Work on a subject interesting to the child by encouraging children to choose the content area.** Look through this manual and choose the project activities based on the interests and skill levels of the children.

- **Relax and have fun.** Some children will want to finish their activities, others may not. There is no need to pressure children of this age to finish an activity, because the real learning takes place while they participate in the activity and interact with others. The finished product should not be the main focus. The knowledge children gain while they explore new areas and experiment with new ideas should be the primary goal.

- **Remain flexible and adapt to the changing needs of the children.** Restlessness or boredom may indicate a need to stop the activity and come back to it later.

- **Encourage children to talk and work with each other.** Children learn best when they are encouraged to freely share their reactions and observations. You may want to ask the children about what they did during an activity, what happened, what was the most difficult, what was the easiest, and what they liked the most.

This manual contains activities for children that allow for a wide range of abilities and provide practice for developing a variety of skills. Many of the projects have additional things to do listed after the activity in the Stretchers section. This section provides ideas to adapt the activity to better match children’s individual skill levels and also provides additional skill practice.
Mini 4-H’ers have lots of fun! There are many activities for you to explore. You can try new things. You can share them with your friends and family.

Here are some things to know about 4-H.

**The 4-H symbol** is a four-leaf clover with an “H” in each leaf. Clover is a plant that grows in fields, yards, and along roadsides. Most clovers have three leaves. Sometimes, if you look very carefully, you may get lucky and find a special clover with four leaves. A four-leaf clover is used as the symbol for 4-H to let everyone know 4-H is a special kind of group.

**The 4-H colors** are green and white. The four-leaf clover is green and the “H” in each leaf is white.

A group motto is a saying that tells people what is important to the group. **The 4-H motto** is “To make the best better.” When something is better than all of the others, it is the best. Think about a time when you did your best. Maybe you threw a ball farther than you have ever thrown it before. Now, think about some ways you could do better. You may be able to throw farther by practicing for a while or by watching someone who can throw farther than you to see how they throw so far. Even if you throw the ball farther than you have ever thrown it before, there are still ways that you can do better the next time. 4-H encourages you to always try to do better, even if you are doing the best you have ever done.
The 4-H Pledge

A pledge is a promise you make to yourself and to the people around you. The 4-H pledge is in bold print below. Under each line of the pledge there are words telling what the pledge means.

I pledge my Head to clearer thinking.

I promise to use my head to make good choices,

my Heart to greater loyalty.

to use my heart to be a good friend,

my Hands to larger service, and

to use my hands to do helpful things for others,

my Health to better living.

to take care of my body and to show others how to live in a healthy way.

for my club, my community, my country, and my world.

to help my group, my community, my country, and my world be happy and safe for everyone.
Are Bugs Like Me?

Have you ever sat and watched a bug? It is fun to watch bugs do bug things. Bugs can crawl and dig and carry things just like people can. Have you ever wondered if bugs have families or what kind of houses bugs go to when they go home? How do bugs talk to each other? What do bugs eat when they want a quick snack? Bugs are very different from people, but bugs also do a lot of the same things that people do. Bugs talk to each other, bugs work together, and bugs eat. Some kinds of bugs are social insects that live together in groups called colonies. Ants and bees are social insects.

Each ant and each bee has its own job to do. There is only one queen in each colony. The queen lays all of the eggs. She lays so many eggs that laying eggs is all she does all day long. She is well taken care of and doesn’t have to do anything for herself. The workers do most of the chores and the things that keep the colony running smoothly. The scouts are the ones that look for food, but the workers have the job of gathering the food and then bringing the food back to the rest of the group. The workers also build the places where the colony lives. Ant colonies live in tunnels under the ground, and bee colonies live together in hives.
Activity 1 – Teamwork Gets More Done

Watch ants on the sidewalk or in the grass as they run back and forth. Ants don’t ever seem to get tired even though they are very small. Many ants spend most of their lives building the underground tunnels they live in. It takes many hours and lots of teamwork to move all of the dirt. The ants are always working to keep the tunnels clear. The tunnels have many small rooms coming off of them. Some of the rooms are used to store food. Some of the rooms are used for the eggs that the queen lays. It takes many ants to keep the colony running smoothly because there is a lot of work to do. Ants work together to get more done.

Things you need:
- Large bowl with uncooked rice
- 2 empty bowls
- 4 spoons

What you do:
1. Have 3 children each scoop 10 spoonfuls of rice into one empty bowl.
2. Have another child scoop 10 spoonfuls of rice into the other empty bowl.
3. Ask the children which group (the 3 children working together as a team or the child working alone) got more done?
Activity 2 – Building Teamwork

Do you think you could build like the ants do? Work with some of your friends to make a mural showing the underground tunnels of an ant colony.

What you need:

- Several feet of paper (like the brown packaging paper that comes on a roll)
- Glue
- Dirt
- Uncooked white rice
- Markers
- Washable black ink stamp pads
- Scraps of colored yarn and paper

What to do:

1. Lay the paper on the floor or across a large table. Tape down the edges.
2. Draw tunnels and connecting tunnel rooms (like the picture below) on the paper with a pencil.
3. Spread glue on the paper and sprinkle with dirt. Try to keep tunnels free of dirt.
4. Use the stamp pad to make fingerprint ants. Be sure each ant has 3 body parts (fingerprints). Add 6 legs to each ant using a marker.
5. Glue ant eggs or larvae (rice) in one of the rooms. Find pictures of what the queen ant looks like so you can add a queen to your colony.
6. Use your markers to draw bug parts or crumbs of food in the room where the ants store their food.
7. You may even want to add earthworms to the dirt around the tunnels using pink yarn, or grass above the tunnels using green construction paper or yarn. Can you think of other things to add to your colony?
Bees work hard just like ants do. Each bee has a special job to do that helps keep the colony growing. There is one queen bee for each colony. She lays all the eggs. The worker bees do most of the other jobs in the hive. The workers take care of the eggs, keep the hive cool, guard the hive, gather the nectar, and store the honey. The workers also build the hive where the colony lives. Worker bees use a special shape to build the hive. A hexagon is a shape that has 6 sides. Things made in the shape of a hexagon are very strong and are not easy to break. Honeycombs are made out of many small rooms called cells. Each cell is in the shape of a hexagon so it will be strong. The queen bee lays her eggs in the cells. Food for the bees is stored in the cells.

**Activity 3 – Build Like the Bees Do**

Things you need:
- Crayons or markers
- Scissors

What you do:
1. Color and cut out all the hexagons on the **Build Like the Bees Do Activity Page**.
2. Put the hexagons together so they make a picture of something that bees like to find.
   (Hint: Bees get nectar from this. Answer on page 26)
Ants gather food from anywhere they can find it. Sometimes ants find dead bugs that they tear apart and take back to their underground homes to store and eat later. Sometimes ants find and pick up crumbs from the food people drop on the ground. When an ant finds food, it needs to be able to tell the other ants where to go so they can help carry the food back to the colony. The ant that finds the food leaves a scent on the ground that the other ants can smell. The ants follow the smell to find the food.

If you have ever been on a picnic, you probably had ants show up even though you did not invite them. Use your imagination to make a picnic that you think ants might like to come to.

Things you need:
- Disposable paper tablecloth
- Paper plates
- Magazines with pictures of food
- Shoe box
- Brown construction paper, cut in strips
- Scissors
- Small black pompoms
- Glue
- Markers

What to do:
1. Weave brown construction paper and cover the shoe box to make a picnic basket.
2. Cut out pictures of food and glue to the paper plates.
3. Lay the tablecloth on the floor or across a table.
4. Glue the paper plates of food to the tablecloth.
5. Make ants by gluing 3 pompoms in a row to the tablecloth. Use markers to give each ant 6 legs. Be sure to put ants all around.
Activity 5 – Help the Ants Find Their Lunch
Activity 6 – Talk to the Bees

Have you ever heard people say that someone is as busy as a bee? This means that the person is working a lot. You could probably guess how this saying got started if you have ever watched a bee fly from flower to flower without stopping to rest. Bees travel from one flower to another to collect nectar. The bees collect the nectar and use it to make honey. Each time the bee lands on a flower to drink the nectar, the bee also gets the pollen from the flower on its body. A little bit of the pollen falls off onto each flower as the bee flies from plant to plant. Plants need the pollen from other plants to help them make new plants. Sometimes a bee will find a lot of great flowers to gather nectar from. The bee will go back to the hive and tell the other bees where to find the flowers by doing a waggle dance. During the waggle dance the bee wiggles its abdomen back and forth very quickly. The bee dances back and forth to let the other bees know which way to go and how far to fly to find the flowers. Do you think you could figure out what a bee is saying by watching his waggle dance? Find out by doing the activity below.

What you need:

- Bee Codes Activity Page
- More Bee Codes Activity Page
- Message From a Bee Activity Page
- Pencil

What to do:

1. Match and copy the letters from the Bee Codes Activity Page to the Message From a Bee Activity Page.
2. Match and copy the letters from the More Bee Codes Activity Page to the Message From a Bee Activity Page.
3. Read the message from the bee.

Activity 7 – To Bee or Not to Bee Funny

Bees work very hard gathering nectar and taking care of the business of keeping the hive running smoothly. Working this hard does not leave any time for anything else. But people have time for things other than work, so here is an activity that is just for fun. See if you can figure out what is funny about the pictures on the next page.

Things you need:
- Bee Careful! page  - Scissors
- Stapler

What you do:
1. Cut along dotted lines.
4. Practice reading the book with the group. Ask children questions to help clarify the joke. Ask the children if they think bees really play jokes on each other. Encourage children to read their book to others.
BEE Careful!

He played a joke on us!

Garbage Dump
Activity 8 – Bugs That Live Alone

Many kinds of bugs live most of their lives by themselves. Butterflies and spiders are examples of bugs that live alone. Butterflies take shelter under leaves and in bushes to protect themselves from the wind and rain. Butterflies flit all around and don’t really have a place they call home. Butterflies start their lives out as eggs. When the eggs hatch a caterpillar comes out. The caterpillar eats and eats until it gets big. Then the caterpillar makes a chrysalis. (KRIS a lis) a sort of cocoon or pouch, around itself where it stays until it becomes a butterfly. The butterfly’s wings are wet when it first comes out of the chrysalis so the butterfly has to dry its wings before it can fly away.

What you need:

- The Life of a Butterfly Activity Page
- Scissors
- The Life of a Butterfly Activity Page 2
- Brass, pronged fastener

What to do:

1. Cut out the circle on the The Life of a Butterfly Activity Page. Lay it aside.
2. Cut out the circle on the The Life of a Butterfly Activity Page 2. Be sure to cut along the dotted lines and remove that section of the circle to make a window.
3. Place the circle from The Life of a Butterfly Activity Page 2 on top of the circle from The Life of a Butterfly Activity Page and punch the pronged fastener through the center of both circles. Be sure to fold out the prongs on the fastener to make sure the circles stay in place.
4. You now can read The Life of a Butterfly starting the story with the window over the butterfly eggs. Next move to the caterpillar, then the chrysalis, then the butterfly with the damp wings, and finish the story with the picture of the full-grown butterfly showing through the window.
The Life of a Butterfly

The Life of a Butterfly
Spiders spend most of their lives alone and do not need other spiders to help them build a place to live. The bodies of most spiders make a silk thread that they weave into a web. The threads that make up the web are very strong even though the threads are very thin. The threads vibrate, or move back and forth very quickly, when something touches them. The spider can feel the movement and then knows that something is in the web. Do you think you would be able to tell if something had landed in your web? Try this activity and see.

Things you need:
- Yarn
- Scissors

What you do:
1. Cut a nine-foot piece of yarn for each child.
2. Tie all the pieces of yarn together at one end.
3. One child is chosen to be the spider. All the remaining children are bugs and sit in a semi-circle around the “spider.”
4. The “spider” holds the ends of the yarn that are tied. Be sure that the “spider’s” fingers are positioned so that he or she can feel the movement of the yarn. Each “bug” takes one of the loose ends of yarn and pulls the yarn so it is stretched fairly tight.
5. The “spider” is blindfolded and the “bugs” take turns plucking their yarn. The “spider” then has to try to guess which thread of the web (string of yarn) has been disturbed by a “bug.”
Activity 10 – Weave Your Own Web

Things you need:
- Sturdy 8” paper plate
- Scotch tape
- Yarn of a different color than the paper plate
- Scissors
- Empty toilet paper tube

What you do:
1. Make cuts 1” long every 2” around the outside edge of the paper plate. Lay the plate to the side.
2. Tape one end of the yarn to the middle of the empty toilet paper tube. Wrap the yarn around the center of the tube about 30 times and cut the yarn.
3. Tape the loose end of the yarn to the back of the paper plate in the center.
4. Start wrapping the yarn around the paper plate. Slide the yarn in the cuts around the edge (see picture below.)
5. Continue wrapping the yarn around the paper plate until all the yarn is used. Untape the end of the yarn from the toilet paper tube and tape the yarn to the back of the paper plate. Be sure to make a spider to go in your web.
Activity 11 – Feed the Spider Game

Spiders use their webs to catch bugs for food. Most of the threads in the web are very sticky. Once the bug lands on these sticky threads the bug usually is trapped and cannot get away. The spider does not even have to leave the web. How many bugs can your spider web catch? Try the activity below to find out.

Things you need:
- Several large buttons per child
- Several paper plate webs from Activity 10

What you do:
1. Place the children in a circle and put the paper plate webs on the floor inside the circle at varying distances from the children.
2. Have children estimate which web they think will collect the most button bugs.
3. The children then toss their buttons into the webs on the floor.
4. Have fun counting the number of button bugs each web collected to see which spider collected the most bugs for supper.
What to Exhibit

This is a list of project activities that can be shown at the 4-H fair or other places. Pick a project activity you would like to try. You do not have to make them in any order. If you have any questions, please call the Extension Office in your county. There are people there who can help you.

- Design and make your own bug using materials around your house.
- Make a poster or book showing the life cycle of a bug.
- Make a poster showing bugs that live in groups on one half and bugs that live alone on the other half.
- Make a project activity as a group and take it to the fair to show the kinds of things your group has been doing.
- Make a scrapbook of pictures showing your group having fun while making the project activities in this manual.
- Make a group mural showing a variety of bugs and where they live.

For information on when to take your project to the fair and where it needs to go, please contact your Extension Office.
More Places to Look

*Ant Cities* (HarperTrophy, 1988) by Arthur Dorros is a book about the interesting world of ants. Instructions for building an ant farm are included.

*From Caterpillar to Butterfly* (HarperTrophy, 1996) by Deborah Heiligman is the story of a caterpillar becoming a butterfly while in a jar in a classroom.

*Spectacular Spiders* (Millbrook Pr Trade, 1999) by Linda Glaser is the story of a yellow and black garden spider as it goes about its daily activities.

*The Roly-Poly Spider* (Scholastic, 1994) by Jill Sardegna is a story of a lonely spider and her eating habits.

*Thinking About Ants* (Mondo Pub, 1997) by Barbara Brenner answers many questions children may have about ants.
