

This bulletin is part of a series to help CRP contract holders assess the land-use options available to them when the contracts expire. Other bulletins in the series and additional information are available at your local Purdue University Cooperative Extension Service Office.

## Inventory Your Resources

**Summary:** Use this worksheet to inventory the resources you have to work with concerning your CRP land.

### LAND

|                                       | Field # | Date Inventoried: |
|---------------------------------------|---------|-------------------|
| Acres                                 |         |                   |
| Crops                                 |         |                   |
| Production Potential                  |         |                   |
| Soil Type(s)                          |         |                   |
| Soil Test                             |         |                   |
| Eroded Areas                          |         |                   |
| Areas Requiring grading or structures |         |                   |
| Fence/Water Available                 |         |                   |
| Desirable grasses/legumes             |         |                   |
| Shrubs/trees                          |         |                   |
| Weeds:<br>Broadleaf                   |         |                   |
| Weeds:<br>Grassy                      |         |                   |
| Residue:<br>Type & Amount             |         |                   |
| Observed Wildlife                     |         |                   |

FACILITIES

|                       | Facility |
|-----------------------|----------|
| Type                  |          |
| Condition             |          |
| Suitability           |          |
| Capacity              |          |
| Water/Fence Available |          |

FIELD MAP

- 1. Locate physical features field boundaries, etc. (ditches, tile blowouts, trees)
- 2. Outline problem weed areas.
- 3. Outline areas which may require grading, structures, or special treatment to prepare for the intended use.
- 4. Outline tree populations and wildlife cover.
