## Demonstration Rain Garden

**County Name**    Warrick

### Background Information

---

The site was previously a grassy area beside a building and a parking lot. The rain garden is located in Friedman Park in Newburgh, Indiana. This site was chosen because it receives runoff from a nearby roof. The rain garden has an ecological impact, as it filters runoff stormwater.

This rain garden is home to 133 native plants of fifteen different species. All plants were acquired from Dropseed Nursery and planted with 18 inch spacing. The 480 square foot rain garden was in-stalled over one day in August 2018. Over the course of 24 hours, the rain garden can drain a total of 5.5 inches of standing water per day.

## Garden Design: Plantings and Information

Plant Scientific Name	Common Name	Number Used
<i>Aster novae-angliae</i>	New England Aster	9
<i>Rudbeckia hirta</i>	Black-eyed Susan	9
<i>Carex vulpinoidea</i>	Fox Sedge	9
<i>Pycnanthemum tenuifolium</i>	Slender Mountain Mint	9
<i>Lobelia siphilitica</i>	Great Blue Lobelia	9
<i>Coelestinum</i>	Mistflower Eupatorium	8
<i>Schizachyrium scoparium</i>	Little Bluestem	9
<i>Penstemon digitalis</i>	Foxglove Beardtongue	9
<i>Amsonia tabernaemontana</i>	Eastern Bluestar	9
<i>Solidago speciosa</i>	Showy Goldenrod	9
<i>Asclepias incarnata</i>	Swamp Milkweed	9
<i>Veronicastrum virginicum</i>	Culver's Root	8
<i>Echinacea purpurea</i>	Purple Coneflower	9
<i>Hypericum punctatum</i>	Spotted Saint John's-wort	9
<i>Hibiscus moscheutos</i>	Swamp Hibiscus	9

## Maintenance Plan: Establishment Period

---

- The garden should be weeded every 2-4 weeks for first six months, then tentatively once a month thereafter.
- Tracking progress of the garden:
  - If desired, a before and after photo of the garden should be taken when it is weeded to help keep track of what should be weeded and what plants should not be removed.
  - Taking a photo of your garden every few weeks will allow one to visually see the maturation of the garden over time; photos could be uploaded to a computer or printed and kept in a photo album to keep as part of the educational display.

## Maintenance Plan: Post Establishment Period

---

### Fertilizer

- Some starter fertilizer could be used on the site due to low potassium levels. Otherwise, the native plants should adapt to the soil type on site

### Watering

- From installation for about a month – water as needed; about 30 minutes – make sure everything is moist. Once plants are established, you should not need to water them except during prolonged dry periods (about one week). If excessive rain is experienced, it is advised to temporarily reroute some incoming water away from the garden by cutting a notch in the berm. Large, mature plants handle saturation better than young, small plants. Water from the rain barrels can be used to water the garden, but in case of a dry period a hose and/or sprinkler system may be used

### Weeding

- During the first few establishment years, weeding should take place every month as needed. Over time, the plants will fill in and weeding won't be necessary. Hand pulling of weeds should be sufficient. Weeding will be provided by the office or it's grounds crew.

### Mulch

- It should be coarse, double shredded hardwood or another alternative which does not easily float. Approximately 3 inches should be maintained in the garden at all times.

## Maintenance Plan: Establishment Period

---

*This is namely for after the two-three year establishment period, but should still be carried out during those first two years.*

- Year-round
  - Keep drain clear and garden clean of garbage
  - Weed (except winter)
- Spring
  - Prune dead vegetation and plants that have grown too large
  - Weed the garden and add mulch if needed
  - Remove excess sediment (i.e. leaves, sticks, debris) that may have collected over winter
  - Remove dead stalks/seed heads from previous season
  - Replenish mulch layer to maintain 3 inch layer
  - Best time to plant new/different plants and replace plants that may have died over winter
  - Plugs establish more successfully than seeds
- Summer
  - Remove weeds (i.e. crabgrass, dandelions etc.)
  - Water during dry periods (based on whether National Weather service declares drought; if no rain for one week)
  - Monitor berm around edge of garden for erosion
- Fall
  - Do not remove (too many) leaves that may have fallen into the garden – leaves will provide compost material for following spring growth; layer of leaves is fine but mounds of leaves are not
  - Remove weeds and diseased plants
  - If fall is dry continue to water until grounds begin to freeze (late October)
- Winter
  - No maintenance is needed; can cut back rain garden to clean up for spring if wanted
  - You should check to make sure garden is clean of garbage, leaves, etc. every few weeks

### About the Rainscaping Education Program

---

The Rainscaping Education Program is a bi-state partnership which offers state-wide training for Master Gardeners, conservation agencies and organizations, stormwater professionals, and landscape companies and consultants.

The two day workshop sessions cover an introduction to rainscaping and rain gardens with specific modules for rain garden site selection, plant selection and garden design, installation, maintenance, and community engagement.

Workshops include hands-on activities, interactive discussions, and field trips to community rainscaping projects. Participants also gain experience through creation of a demonstration rain garden with community partners in a public space.
